| Rel. retum | -1.4 | -2.6 | -10.3 | 6.9 |

## Investment points

Woongjin Coway shares are oversold due to Woongjin Holdings' plan to sell its stake in the company. The fundamentals are intact as growth will continue and profit gains will accelerate this year despite economic weakness. It is time to buy the stock based on robust fundamentals.

## Quick view

Initiate coverage with BUY and 6M TP of W51,000

- Target price derived from SOTP combining DCF-based operating value and the value of investment assets.
- The outlook favorable for 2012 amid strength in the rental business and the narrowing of losses in the cosmetics business: sales and OP forecast to rise $10.4 \%$ and $16.2 \%$ yoy, respectively
- The stock currently trades at a 2012E P/E of 14.7x, undervalued relative to Amore Pacific and LG Household \& Healthcare.
Stable growth and cash flow gains continue on environmental appliances demand and increased product line-up
- Order intake hit a record in 2011, reflecting rising demand for environmental home appliances amid increased environmental awareness and wellness trends.
- The existing customer base alone is big enough to support stable growth: $80 \%$ rental renewal rate, low churn, increasing product per customer (PPC).
- New product additions continue, including mattresses introduced in 2011.
- The food waste disposer market's growth at home with the increased adoption of pay-as-you-go garbage collection system will provide long-term growth opportunities along with rising exports.
Uncertainty over sale is not much of a risk
- Depending on who takes over Woongjin Coway, new growth opportunities will open up. Coway has little to lose by leaving Woongjin Holdings.
- Given its overwhelming lead, Coway will not likely slow in earning growth during the transition.
- Excellent cash flows, a strong door-to-door sales force, and a solid customer base are advantages for Coway's business growth.

BUY, 6M TP of W51,000

DCF is a better measure of the company's operating value than PER

## I. Valuation

## Initiate coverage with BUY and 6M TP of W51,000

We initiate our coverage of Woongjin Coway with a BUY rating and a six-month target price. Woongjin Coway, the largest rental company of environmental home appliances in Korea, has built an unrivalled market position backed by differentiated product quality, door-to-door sales force advantages, and a strong brand image. Despite concerns over the rental market's saturation, the company continues to achieve stable growth by keeping up with new demand and steady replacement demand for environmental home appliances.

We have valued Woongjin Coway based on the sum-of-the-parts (SOTP) method combining DCF-based operating value (terminal growth $2 \%$ and WACC $8.5 \%$ ) and the value of investment assets (Woongjin Chemical and a Chinese subsidiary).

Rental services, which represent Woongjin Coway's core business, have strong continuity. Rental contracts set for five-year terms typically last for an average of four years, and the renewal rate is more than $80 \%$. Cash flows are negative in the early rental contract period but turn positive over time. Therefore, the DCF method, which fully captures the company's unique business model and cash flows over a period of time, is a better measure of the company's operating value than PER, which captures the operating value at a specific point in time.

The $2 \%$ terminal growth rate looks reasonable because the company's dominant market presence keeps replacement demand strong and constant product upgrades keep product prices high. EBITDA includes cashless rental property disposal losses.

Target price translates into a 12M Fwd P/E of 19.1x

Amore Pacific and LG
Household \& Healthcare as peers

Among investment assets, we have valued the Chinese subsidiary at a target P/E of $15 x$ 2012E EPS and Woongjin Chemical at a $30 \%$ discount. We have excluded minor subsidiaries such as Green Entech from our valuation.

The 12-month forward P/E implied in the W51,000 target price is $19.1 x$ (or $19.8 x$ if including treasury shares) on an unconsolidated basis.

Equity method gains from Woongjin Chemical and the Chinese subsidiary are forecast at W13.3bn or W180/share in 2012, which reduces the implied P/E to 17.8x.

We have used unconsolidated data for peer comparisons. Overseas subsidiary sales are small if intra-company transactions are excluded. EPS is expected to grow W180 in 2012.

We have excluded Lock \& Lock and Orion from comparison because of the importance of their China growth story to their valuations. Amore Pacific and LG Household \& Healthcare are best for peer comparisons in terms of business stability and profitability.

Woongjin Coway has no reason to be discounted relative to Amore Pacific or LG Household \& Healthcare

Woongjin Coway's OP margin is similar to that of Amore Pacific, while its EBITDA margin is the highest among domestic demand-oriented companies (including Amore Pacific and LG Household \& Healthcare). The premium valuations of Amore Pacific and LG Household \& Healthcare have been driven by their inorganic growth and growth optimism for the domestic cosmetics market.

Amore Pacific and LG Household \& Healthcare currently trade at a 2012 P/E of over 20x, even though their EPS growth is slowing this year, compared with Woongjin Coway, which trades at a 2012E P/E of 14.7x. Woongjin Coway's valuation discount to peers is even wider based on EV/EBITDA that reflects cash flows.

Woongjin Coway is under pressure after sale announcement; currently undervalued relative to fundamentals

Woongjin Coway outperformed the broad stock market in January and early February after favorable 4Q11 results. Woongjin Coway shares came under selling pressure following Woongjin Holding's announcement of a plan to sell its stake.

As the sale takes shape, Woongjin Coway's fundamentals will get a fresh look, while expectations rise for growth under new ownership.

## II. Earnings and outlook

## Double-digit sales and profit growth ahead for 2012

1Q12 results should be favorable with sales and OP rising $11 \%$ and $14 \%$, respectively

In 2012, the number of rental orders is forecast to reach 1,265,000 on the addition of mattresses to the product portfolio

In 1Q12, Woongjin Coway's sales and OP are forecast to expand 11.1\% and 13.7\% yoy, respectively, to W444.0bn and W64.2bn with an OP margin of $14.5 \%$. Order intake tends to slow qoq in the first quarter of the year due to fewer operating days and a lull in sales promotions and new product releases. Yet, the rental business' growth will reach $10 \%$ in 1Q12, propelled by customer growth during 2Q11-3Q11 and low cancellation rates, which will lift total sales $11.1 \%$. Going forward, rental order growth will quicken. In March when seasonal yellow dust storms from China begin to affect the Korean peninsula, Woongjin Coway will launch sales promotions for air humidifier cleaners. The company will also roll out new products such as table-type ice and water dispensers.

In 4Q11, price increases for long-term membership customers with a 9-10 year history led to some customer defections and a drop in membership accounts. Recently, the company rolled back the price increases and extended membership services to mattresses. The number of membership accounts will likely rebound in 2Q12.

Rental order intake hit a record 1,270,000 in 2011. Monthly cancellation rates averaged $1.04 \%$, the second lowest since 2007 (1.00\%). The number of rental customers rose 305,000, the largest increase since 2006.

In 2012, the number of rental orders is forecast to reach $1,265,000$. The contributing factors are robust sales of mattresses launched in November 2011 and the introduction of air humidifier cleaners and small-sized water dispensers aimed at single-person households. The monthly average cancellation rate is expected to fall to a record low of $0.99 \%$ in 2012, helped by contract obligation period extensions and service quality upgrades.

For all of 2012, sales will climb $10.4 \%$ to $\mathrm{W} 1,887.1$ bn on increased sales to overseas subsidiaries in Malaysian and other countries and water treatment business revenue recovery.

2012 OP margin is forecast to rise $0.7 \%$ p on a rise in rental accounts with sales commissions fully recognized and a reduction in losses from the cosmetics business

The margin outlook is positive for 2012. Woongjin Coway moved to IFRS reporting in 2011. Under IFRS, the sales commission recognition period for the rental orders placed in and after 2009 is reduced from five years to two. The result was a higher OP margin in 2010 and a lower OP margin in 2011, compared with K-GAAP. From 2012 onward, rental accounts with sales commissions fully recognized will rise as a percentage of total outstanding rental accounts, lifting rental margins. Margins may slow if an influx of new rental orders increases the base total, but even in this case, a margin slowdown can be offset by increased revenue with little impact on the bottom line.

Meanwhile, the cosmetics business, which reported sales of W68bn and an operating loss of W19.5bn in 2011, will see sales surge 35\% to W90bn in 2012 with the launch of "K-Line" featuring famous actress Hyun-jeong Koh as a follow-up brand to Allvit. The division's operating loss will diminish to W7bn, contributing to a $0.7 \%$ p overall OP margin improvement to $14.9 \%$.

Fig 4. Sales forecast

Fig 7. EPS forecast

[^2]A reversal to equity method gains is expected in 2012

We expect similar payouts at a dividend payout ratio of about $40 \%$ going forward

Woongjin Coway reports on an unconsolidated basis under IFRS without equity method gains or losses from Its Chinese subsidiary, which operates the environmental home appliances and cosmetics businesses, and Woongjin Chemical. Woongjin Chemical's NP sharply decreased from W60.3bn in 2010 to W4.0bn in 2011 due to poor market conditions, a heavier cost burden, and inventory disposal losses. Equity method losses from overseas subsidiaries are estimated to have widened to W9.8bn in 2011 after increased investments in Thailand and other countries.

A reversal to equity method gains is expected in 2012 as the Chinese subsidiary continues to hum along, Woongjin Chemical rebounds from a profit retreat, and the Malaysian subsidiary returns to profit. Specifically, 2012 equity method gains are forecast to reach W13.3bn, equivalent to EPS of W180, excluding treasury shares.

Woongjin Coway will pay a W1,050/share dividend for 2011, and we expect similar payouts at a dividend payout ratio of about $40 \%$ going forward, which may change, depending on who takes over the company.

## III. Solid as a rock

## Strongly positioned in core markets

Korea's largest rental company; the majority of sales come from rental and membership services

Woongjin Coway is Korea's largest rental company deploying water dispensers, bidets, air cleaners, and other environmental home appliances. Its sales break down as follows: rental services under five-year contracts (70.5\%), membership services based on full upfront payments (9.4\%), single-payment sales (8.1\%), and exports and cosmetics (12.0\%).

Its rental and membership services generate the largest portion of sales (58.4\%) from water dispensers. Bidets (16.5\%) and air cleaners (14.9\%) are the next best-selling items. Others include mattresses (launched in 2011) and food waste disposers.

Woongjin Coway holds a wide lead over competitors

Customer defections from Woongjin Coway look unlikely.

Within the rental market, Woongjin Coway has an unrivalled position. Chungho Nais is a distant second, and its rental sales and assets are $14.6 \%$ and $15.9 \%$ of Woongjin Coway's based on 2010 figures. The corresponding figures for Kyowon L\&C, the third, are $6.2 \%$ and $11.3 \%$, respectively. The gaps grow even wider when it comes to margins and cash flows. A Gallup Research poll conducted in 2H11 showed that Woongjin Coway's market shares stood at $54.7 \%$ for water dispensers, $46.9 \%$ for bidets, and $44.0 \%$ for air cleaners, well above the second-biggest competitor's (11.6\%, 19.5\%, and 12.5\% each).

Smaller rental companies are ramping up rental business competition lately, but customer defections from Woongjin Coway look unlikely because underpricing strategies alone will not persuade Woongjin Coway's customers accustomed to premium services to switch brands. Health-conscious customers of environmental home appliances tend to have high brand loyalty.

Customer expectations and needs will diversify, and Woongjin Coway is well positioned to meet that trend

Competition from smaller rental companies will increase the market pie by luring new customers at low price points. Low-end customers will migrate toward the high end of the market over time, providing Woongjin Coway with a new source of long-term growth.

As the market base of environmental home appliances expands, customer expectations and needs will diversify, making constant product and service upgrades necessary. Woongjin Coway is well positioned to meet that trend because of its virtuous cycle of cash flows.

## V. New businesses drive long-term growth

## Export growth continues, and the cosmetics business looks set to turn a profit in 2013

Exports are the fastest growing segment

Exports account for only $5.7 \%$ of Woongjin Coway's total sales, but export sales are growing. Exports surged $42 \%$ to W98.1bn in 2011: overseas subsidiaries (38\%), OEM $(41 \%)$, and other sales ( $21 \%$ ). OEM sales growth is now leading export growth. OEM sales of air cleaners to major home appliances makers such as Philips in China and India increased $97 \%$ in 2011 in dollar terms, and the trend will continue in 2012. In particular, China's demand for air cleaners will rise rapidly in line with rising income and increasing environmental awareness.

The company's subsidiaries in Malaysia and the US increased their sales $91 \%$ and $62 \%$, respectively, in 2011, bringing sales growth at overseas subsidiaries to $58 \%$ in dollar terms. Export sales are forecast to expand $28 \%$ in 2012 and rise $21 \%$ annually on average for the next three years, driven by OEM sales and overseas subsidiaries' sales.

Cosmetics business growth continues

Woongjin Coway launched cosmetics door-to-door sales operations in September 2010. The cosmetics division registered an operating loss of W13.bn on sales of W23.4bn in 2010 and a W19.5bn operating loss on sales of W68.Obn in 2011. Excluding the cosmetics division, Woongjin Coway's 2011 OP margin would have come in at $16.0 \%$ or $1.8 \%$ p higher.

The cosmetics division has yet to make money, but early sales growth looks positive. The company is extending its reach to department stores and duty-free shops to increase its brand awareness, while continuing to beef up its product line-up including Hyun-jeong Koh's cosmetics line.

The cosmetics division will continue incurring heavy marketing expenses in the brand start-up stage

The cosmetics division is targeting sales of W100bn and the first operating profit in 2012. Our conservative forecasts are sales of W90bn and an operating loss of W7.0bn for 2012 and sales of W135.0bn and an OP of W3.4bn for 2013. The division will continue incurring heavy marketing expenses in the brand start-up stage.

Fig 17. Cosmetics division sales forecast

Chinese subsidiary's cosmetics business is going smoothly; sales are projected to increase at a 3year CAGR of $14 \%$

Woongjin Coway's wholly-owned Chinese subsidiary, which focuses on cosmetics, posted solid results in 2011 with sales up $14 \%$ to RMY309mn with an OP margin of $23 \%$. The sales growth came despite consolidation of small stores and poorly performing brands. China sales are forecast to increase $14 \%$ annually on average over the next three years with the ramp-up of direct sales and increased regional coverage. Meanwhile, NP is forecast to grow at a 3-year CAGR of $12 \%$ with the full tax rate of $25 \%$ kicking in from 2013.

# VI. Sale uncertainty is not much of a risk 

## Our take on Woongjin Holdings' sale of Woongjin Coway

Exit is inevitable

Woongjin Holdings may or may not acquire Woongjin Coway's noncore assets and subsidiaries

Impact on eamings will be minimal

1. Why

At the end of 3Q11, Woongjin Holdings' debt stood at W900bn. Debt will likely grow further to meet construction and solar business investment and working capital needs. Dividend income from Woongjin Coway (assuming a 50\% payout) will not be enough to cover the cost, given Woongjin Holdings' 28\% stake.

Selling a portion of the stake can only hurt the value of Woongjin Coway. Therefore, Woongjin Holdings has no choice but to offload the entire stake. Now, Woongjin Holdings has to find a buyer that offers the best price.
2. What

A 30.8\% stake including shareholdings owned by other major shareholders will be put up for sale. Woongjin Holdings will acquire Woongjin Coway's businesses other than environmental home appliances, including the domestic cosmetics business and water treatment business and subsidiaries (the Chinese subsidiary, Green Entech, and Woongjin Chemical), though even that could change.

Woongjin Holdings' acquisition of Woongjin Coway's non-core businesses is aimed at maximizing Woongjin Coway's value and making it more saleable. If the buyer wants all of Woongjin Coway, Woongjin Holdings will likely give up all of the company.
3. Impact on Woongjin Coway's earnings

The earnings impact on Woongjin Coway's existing businesses will be limited. Currently, Woongjin Holdings generates sales of about W100bn (OP margin: 10\%) from Woongjin Coway, which include brand royalties, MRO, call center revenue, and advisory service fees. Similarly, Woongjin Coway gets sales of W100bn (OP margin: 10\%) from Woongjin Holdings' other subsidiaries.

Woongjin Coway's intra-company transactions worth W175bn (except for the W25.0bn it spends to purchase filters from Woongjin Chemical) means potential cost savings. Woongjin Coway has operational claims on all of its assets and patents.

A sales force loss may result and looks unlikely, given Woongjin Coway's industry-leading customer base, product quality and brand power. Moreover, a sales force restructuring is unlikely because a sales force is an important intangible asset to the buyer.

Woongjin Coway is an attractive acquisition target for consumer goods manufacturers

The stake sale will be priced at a little over W1.2tn if a 30\% premium is added
Strong cash flows and the low cost burden keep the door open to future growth opportunities
4. Who

Woongjin Coway is an attractive acquisition target for consumer goods manufacturers: 1) Woongjin Coway has 2.8 mn middle-class consumers as its customers, and $80 \%$ of its customers are repeat customers; 2) Woongjin Coway has a strong door-to-door sales force; and 3) Woongjin Coway's strong brand loyalty allows it to sell high-priced products to existing customers. The company's well-established business model means it is better suited for established manufacturers than for investment funds seeking restructuring premiums.

Financial investors seeking dividend income may express interest in holding a stake in Woongjin Coway. Foreign consumer goods companies seeking an established local distribution network could also find Woongjin Coway attractive.

## 5. Price

The stake sale will be priced at a little over W1.2tn if a $30 \%$ premium is added to the current share price level. That is equivalent to 20x 2012E NP. A DCF valuation suggests a higher price, given Woongjin Coway's excellent cash flow

The nature of the rental business requires considerable amounts of working capital and time in the start-up stage. When more accounts pass the break-even point, the cash flow improves rapidly and operating leverage increases because much of the upkeep cost is variable costs. Woongjin Coway has achieved this virtuous cycle of cash flows. Coupled with its large door-to-door sales force that comes in direct contact with middle- and upperincome customers, it keeps the door open to future growth opportunities.

Woongjin Coway has maintained a high dividend payout ratio of $40-50 \%$ with occasional share buybacks. Under new ownership, the company will be able to spend more money on business growth based on synergy.
